

## SOLID STRANDWOVEN BAMBOO DECKING

Panda Bamboo strandwoven bamboo decking planks are made using a new-generation, improved manufacturing process which gives greater stability and long-term performance for outdoor decks and cladding. This product has been used successfully in a variety of climates in Asia, Australia and Europe for over 5 years.

- Panda strandwoven bamboo decking planks are treated and pre-oiled. They have a smooth top surface with rounded edges – this facilitates water run-off and easy cleaning.
- The grooves on the edges of the planks allow for installation using a hidden clip system, (no drilling and screwing through planks). Underfoot comfort and a “softer” appearance is assured.
- Plank size: 1870 x 140 x 20mm

### INSTALLATION AND CARE

- Care and regular maintenance ensures an optimum appearance and lifespan of the deck.
- Treat the deck immediately after installation, taking care to coat the cut ends of the planks.
- The deck should be cleaned annually with a stiff broom and a weak bleach solution, allowed to dry completely and then re-treat. There are a number of locally available treatment products made for high density, low porosity timber, ideal for use on strandwoven bamboo decking.
- Good practice for any decking installation dictates that the deck be installed with a slight slope to facilitate water runoff, and with adequate drainage space beneath the planks.
- Recommended spacing of joists or battens is 400 – 500mm.
